Print length : 192 pages

Fertility and Gender in East Timor is an insightful exploration of the complex and evolving relationship between fertility, gender, and society in East Timor. This book provides a comprehensive overview of the current state of affairs, highlighting the challenges and opportunities faced by women and men in the country.

East Timor is a young country, with a median age of just 20 years. The country has a high fertility rate, with an average of 4.9 children per woman. This high fertility rate is due to a number of factors, including cultural norms, lack of access to contraception, and poverty. The high fertility rate has a number of implications for East Timor, including rapid population growth, strain on resources, and increased poverty.

Gender inequality is a major issue in East Timor. Women are often denied access to education, healthcare, and employment opportunities. This

inequality has a number of consequences, including high rates of maternal mortality, low levels of female literacy, and high levels of violence against women. Gender inequality also contributes to the high fertility rate, as women who have limited opportunities are more likely to have children.

Fertility and Gender in East Timor is a timely and important book that sheds light on a critical issue facing the country. This book is a valuable resource for researchers, policymakers, and anyone interested in the development of East Timor.

Key Findings

- The fertility rate in East Timor is 4.9 children per woman.
- The high fertility rate is due to a number of factors, including cultural norms, lack of access to contraception, and poverty.
- Gender inequality is a major issue in East Timor, with women facing discrimination in many areas of life.
- Gender inequality contributes to the high fertility rate, as women who have limited opportunities are more likely to have children.
- The high fertility rate has a number of implications for East Timor, including rapid population growth, strain on resources, and increased poverty.

Recommendations

The following recommendations are made in Fertility and Gender in East Timor:

- Increase access to contraception and family planning services.

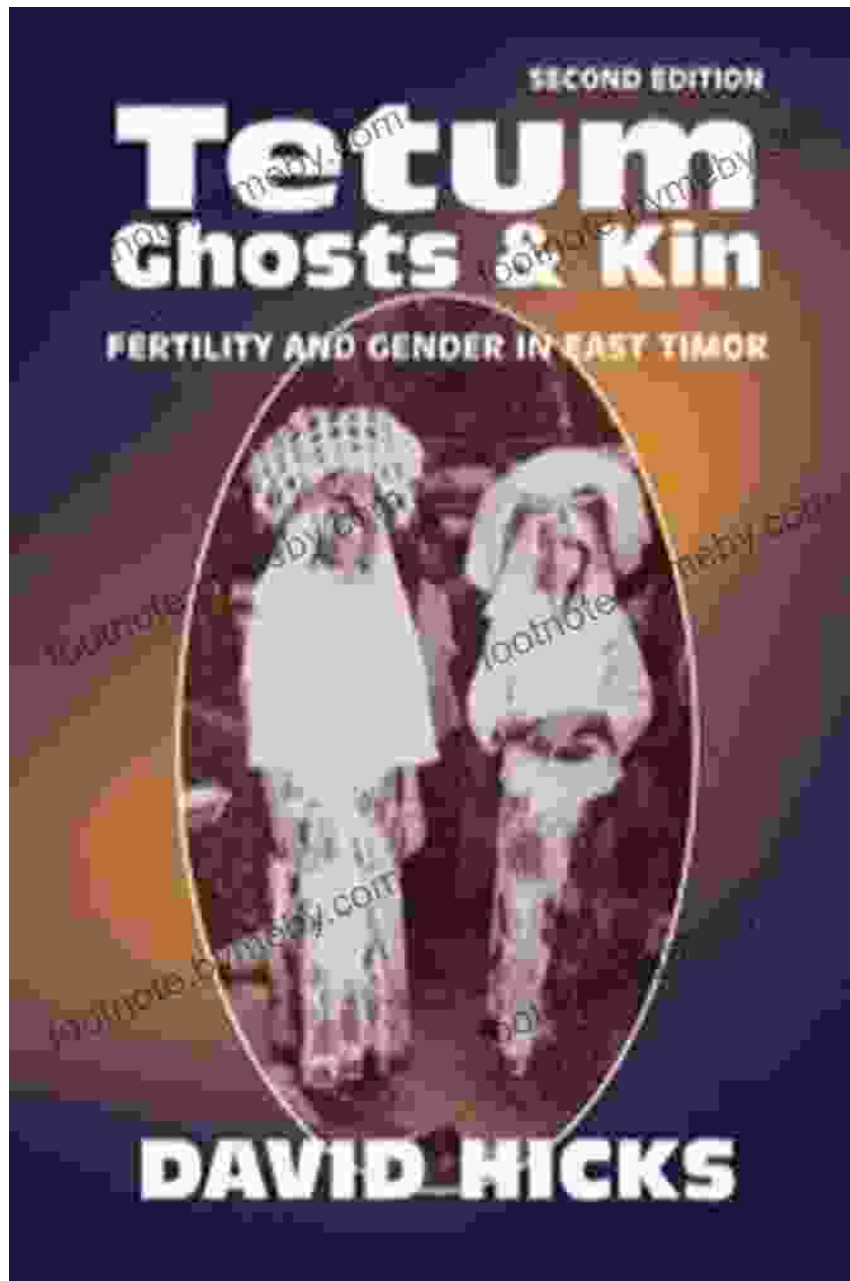

- Address gender inequality through education, empowerment, and legal reforms.
- Invest in health and education to improve the lives of women and children.
- Promote sustainable development to reduce poverty and improve living standards.

Fertility and Gender in East Timor is a valuable resource for anyone interested in the development of the country. This book provides a comprehensive overview of the current state of affairs, highlighting the challenges and opportunities faced by women and men in the country. The recommendations made in this book are essential for addressing the high fertility rate and gender inequality in East Timor.
