

# Low Tech, Low Cost Techniques: Water Your Garden for Up to 90% Less

Water is essential for life, but it's also a precious resource that we need to conserve. In many parts of the world, water scarcity is a serious problem, and it's only going to get worse as the climate changes.

Even if you don't live in a water-scarce area, it's still important to conserve water whenever possible. Watering your lawn and garden accounts for a significant portion of household water use, so by taking steps to reduce your water consumption, you can help protect this valuable resource.

The good news is that there are many simple and affordable ways to water your garden for up to 90% less. In this article, we'll share some of the best low-tech, low-cost techniques that you can use to keep your plants healthy and thriving while saving water.

## Gardening with Less Water: Low-Tech, Low-Cost Techniques; Use up to 90% Less Water in Your Garden

One of the best ways to reduce water evaporation from your garden is to mulch around your plants. Mulch is a layer of organic material, such as shredded leaves, bark, or compost, that helps to keep the soil moist and cool. It also helps to suppress weeds, which can compete with your plants for water and nutrients.

To mulch your garden, simply spread a 2- to 4-inch layer of mulch around your plants. Be sure to keep the mulch away from the stems of your plants, as this can promote rot.

Drip irrigation is a water-efficient irrigation system that delivers water directly to the roots of your plants. This system uses a network of pipes and emitters to deliver a slow and steady stream of water to each plant.

Drip irrigation is much more efficient than traditional overhead watering methods, such as sprinklers or hoses. This is because drip irrigation delivers water directly to the roots of your plants, where it can be absorbed immediately. Overhead watering methods, on the other hand, often result in water evaporating before it reaches the roots of your plants.

To install a drip irrigation system, you'll need to [Free Download](#) a drip irrigation kit and some PVC pipe. The kit will come with everything you need to set up the system, including the pipes, emitters, and a timer.

Rain barrels are a great way to collect rainwater for use in your garden. Rainwater is free, and it's also better for your plants than tap water. This is because rainwater is naturally soft and contains no chemicals.

To collect rainwater, simply place a rain barrel under a downspout. You can then use the water to water your plants, wash your car, or even flush your

toilets.

Xeriscaping is a type of landscaping that uses plants that are adapted to dry conditions. These plants require less water than traditional lawn and garden plants, making them a great choice for water-scarce areas.

Some of the best xeriscaping plants include:

- **Succulents:** Succulents are plants that store water in their leaves, stems, or roots. This allows them to survive in dry conditions.
- **Cacti:** Cacti are a type of succulent that is native to the desert. They are very tolerant of drought and require very little water.
- **Grasses:** There are many types of grasses that are drought-tolerant. These grasses are a great choice for low-water lawns.
- **Shrubs:** There are also many types of shrubs that are drought-tolerant. These shrubs are a great choice for adding color and texture to your landscape.

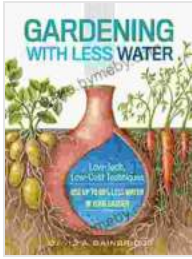

By using the low-tech, low-cost techniques described in this article, you can water your garden for up to 90% less. This will help you to conserve water, save money, and protect the environment.

So what are you waiting for? Start using these techniques today and see how much water you can save!
